1 Listings

Some text before the first listing, long enough to make a line or two of a paragraph before the code starts.

```
def fib(n):
    """The n-th Fibonacci number."""
    return n if n < 3 else fib(n - 1) + fib(n - 2) + 1
```

A paragraph between the listings, with `int x = 42;` inline in its text.

```
#include <stdio.h>

int main(void)
{
    printf("hello, world\n");
    return 0;
}
```

```
fn main() {
    let v: Vec<u32> = (1..10).map(|x| x * x).collect();
    println!("{:?}", v);
}
```

Final words after the last listing.
